

# How to Problem Solve

Consider the problem you want to solve as a whole or break it down into smaller, manageable parts. This makes it less overwhelming to tackle.

**What problem or part of a problem are you trying to solve?**

---

- 1- Brainstorm all possible ideas that could solve it. Be creative and don't worry about finding the perfect solution yet. If you have more than 4 ideas, write them on another page

--	--	--	--

- 2- Pick the best 2 ideas. Take a closer look at each idea and choose the best 2 that seem the most doable and effective.

--	--

- 3- From the 2 finalists, which one is the winner? Consider all the Pros and Cons.

--

- 4- Put it into action. Try your chosen solution and pay attention to whether it works or not.

- 5- Keep observing. After seeing your solution in action; has it solved your initial problem, how you wanted it to? If not, make some changes or try a different solution.
